

Mutual Fund Analytics Dashboard

Capstone Project

Tanaji Abasaheb Gade

Python | SQL | SQLite | Power BI

Project Overview

- **Analyze mutual fund investment data.**
- **Perform data cleaning using Python.**
- **Store data in SQLite database.**
- **Build an interactive Power BI dashboard.**
- **Generate insight into investment trends and investor behavior.**

Technology Stack

- **Python – Data Cleaning & Analysis**
- **SQL – Database Queries**
- **SQLite – Data Storage**
- **Power BI – Dashboard & Data Visualization**
- **Git & GitHub – Version Control & Collaboration**

Dashboard Overview

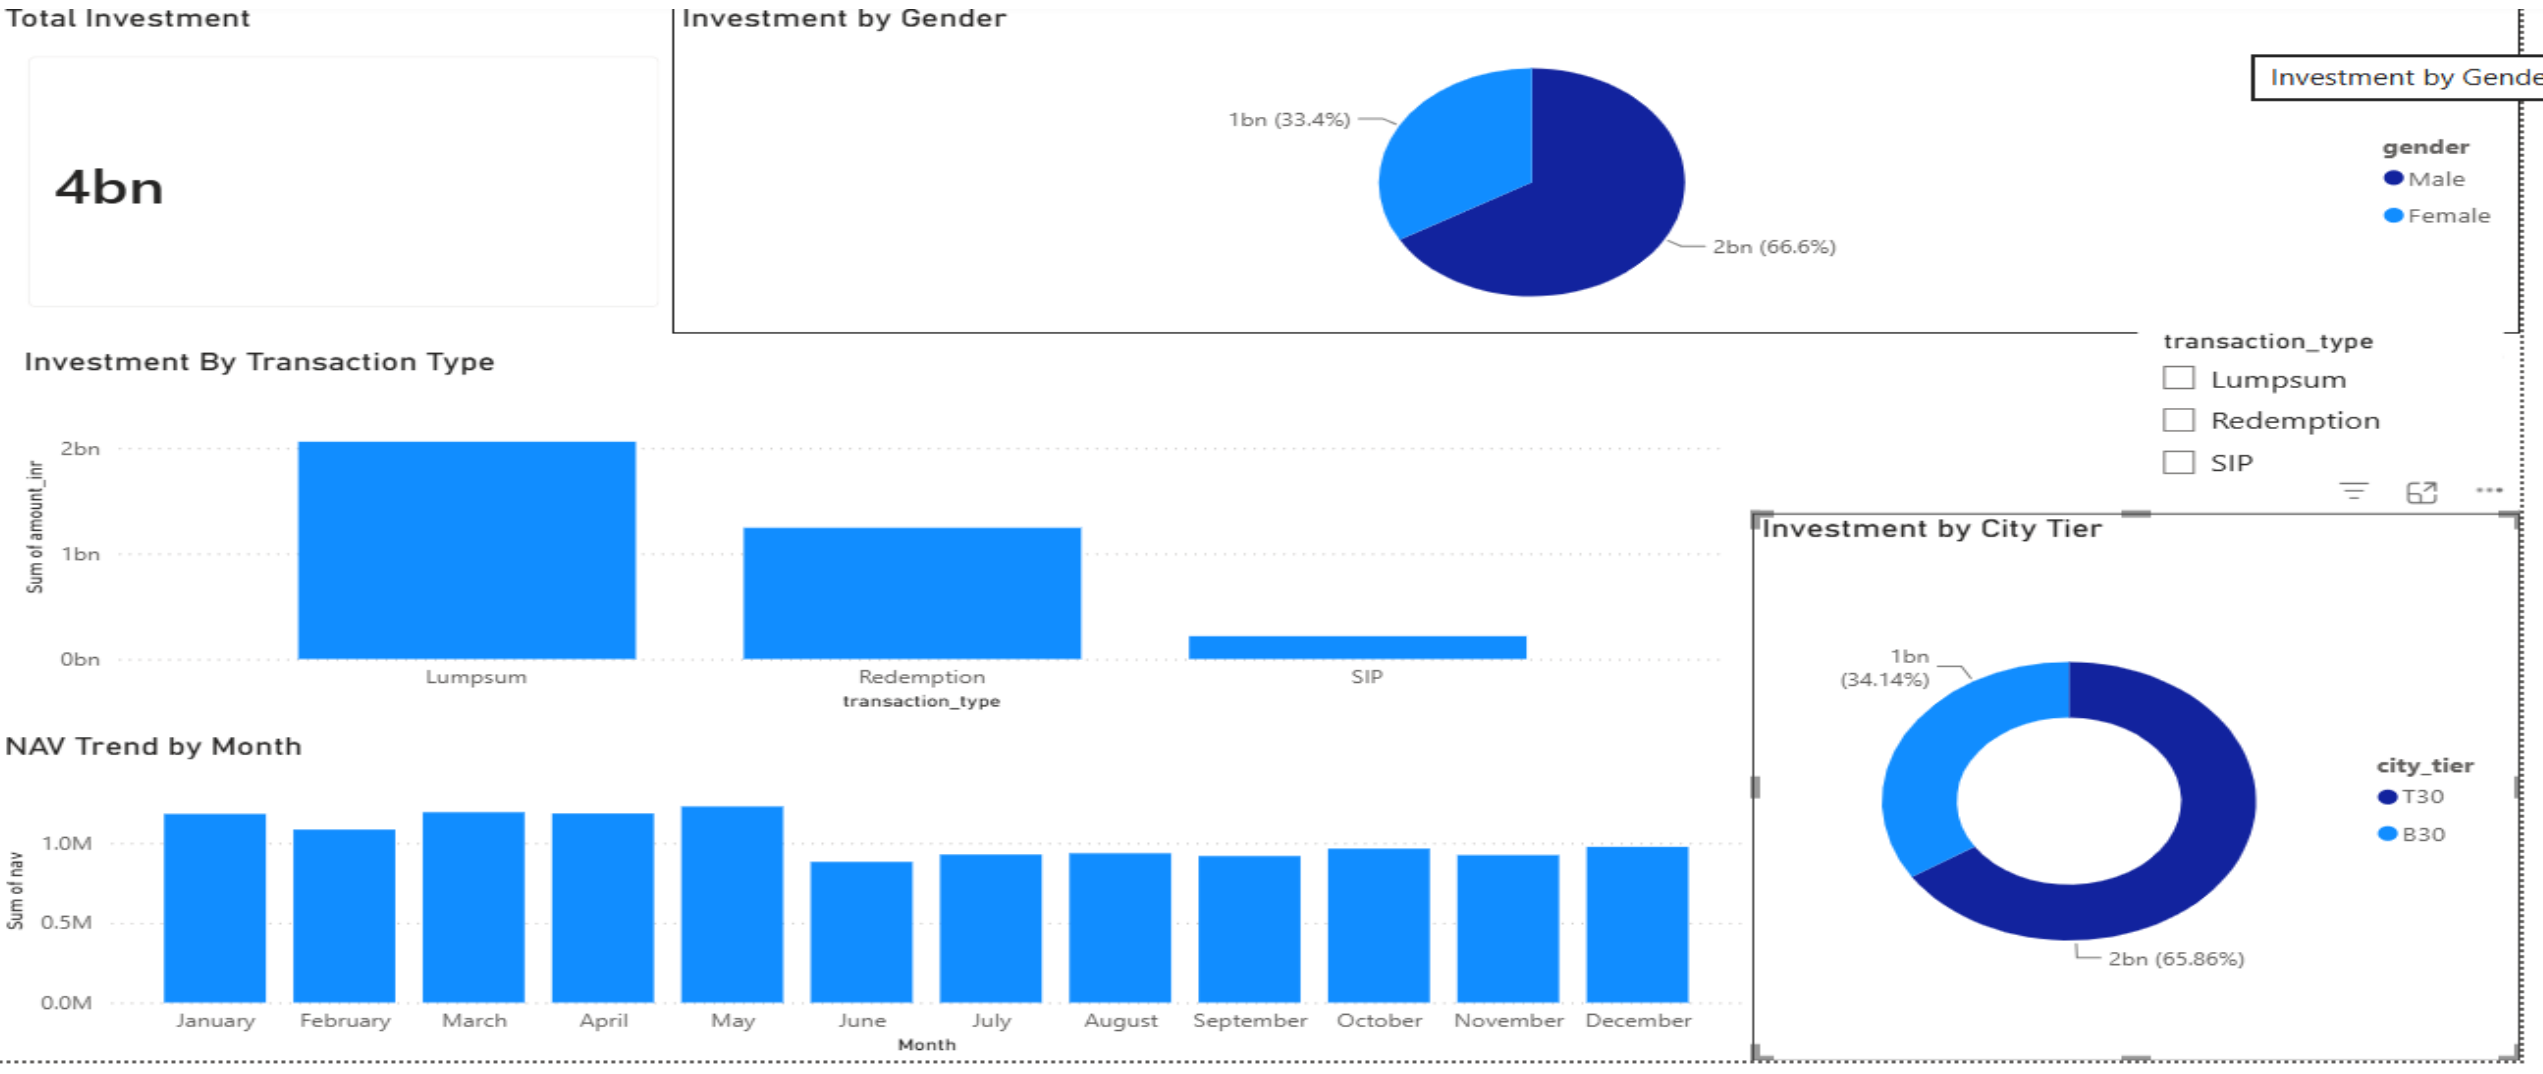

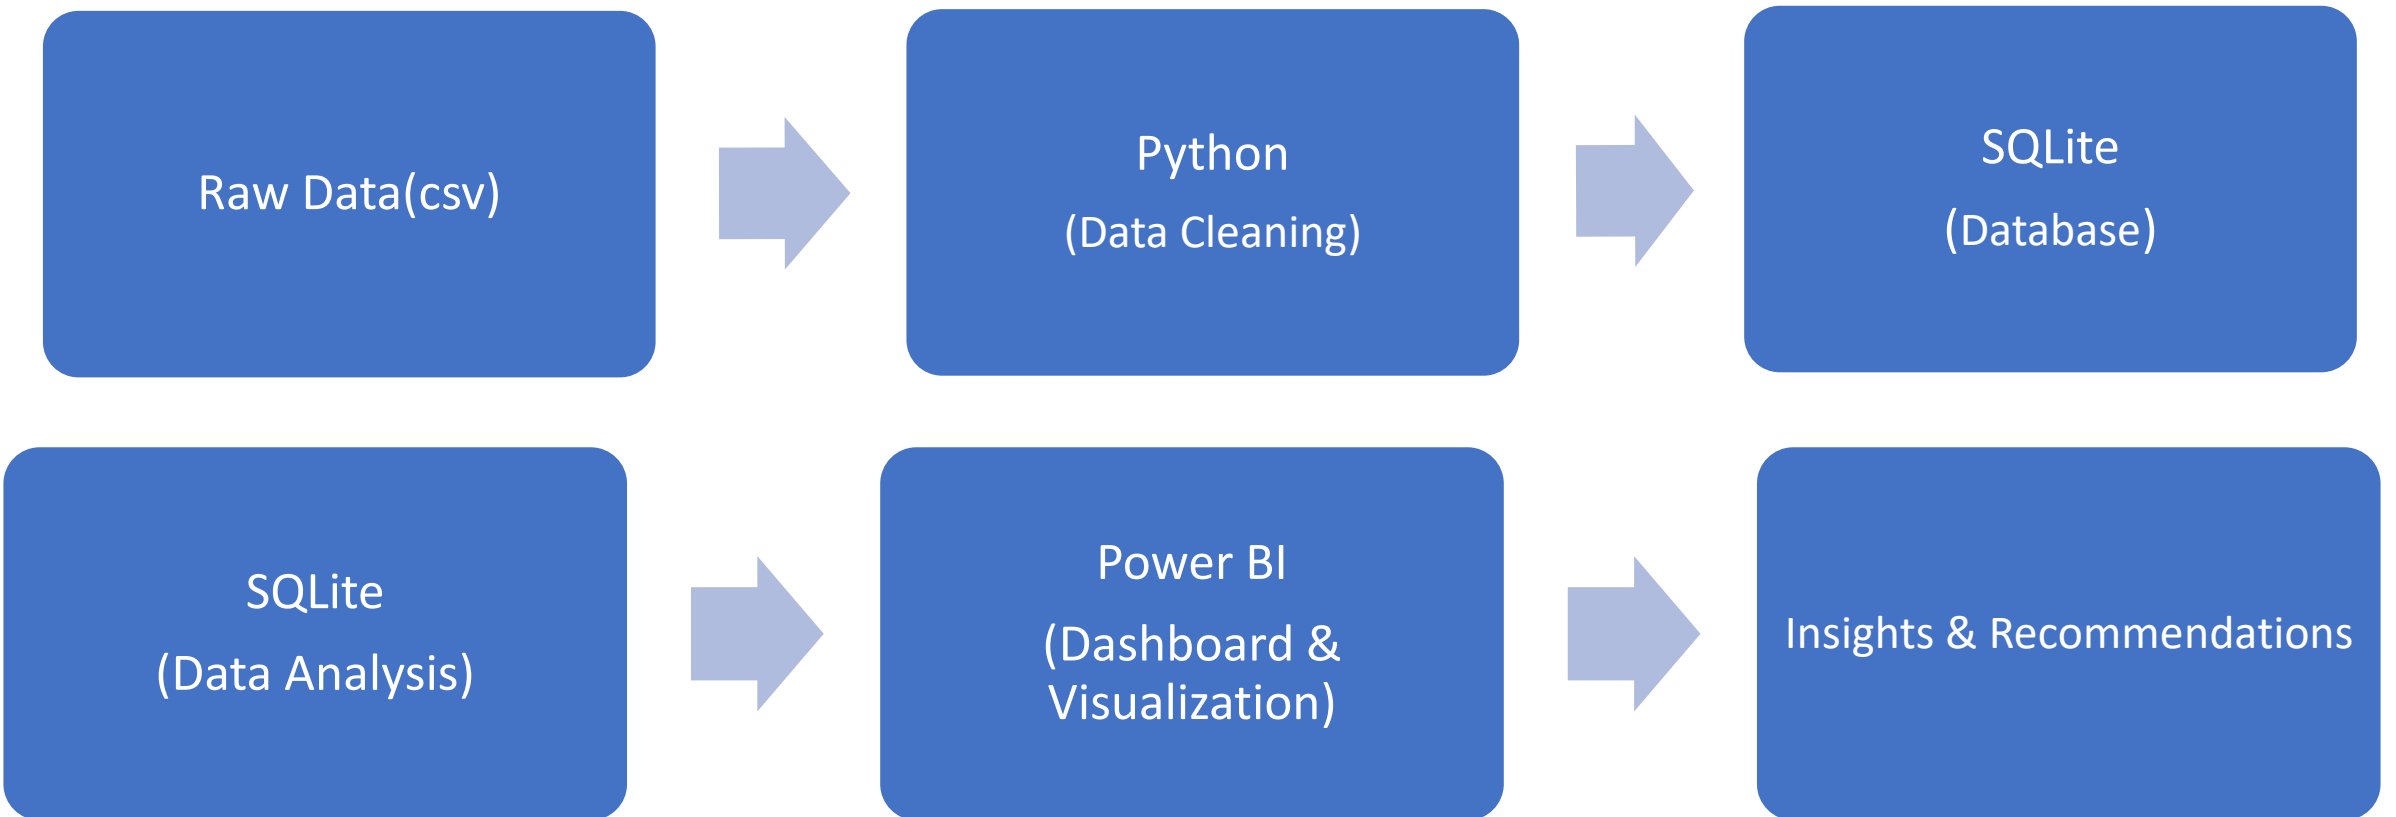

Figure 1: Power BI Dashboard showing key investment insights.

Project Workflow

Key Insights

- **Total investment analyzed: 4 Billion+**
- **Lumpsum investment contributed the highest amount.**
- **Male investors accounted for a larger share than female investors.**
- **Tier-1 cities showed higher investment activity.**
- **Monthly NAV remained relatively stable throughout the year.**

Conclusion

- Successfully analyzed mutual fund investment data.
- Cleaned and processed the dataset using Python.
- Stored data in SQLite and performed SQL analysis.
- Developed an interactive Power BI dashboard.
- Generated meaningful insights to support investment decisions.

Thank You!
